1. Project Overview

The Employee Management System is a web-based application designed to manage internal employee processes including attendance tracking, leave requests, document requests, and repurchase approvals.

2. System Objectives

- Digitize HR administrative processes.
- Improve monitoring of employee activities.
- Centralize employee-related data.
- Simplify approval workflows.

3. User Roles

Staff: submit requests and attendance.

HR: manage documents and attendance.

Finance: handle repurchase payments.

Director: approval authority.

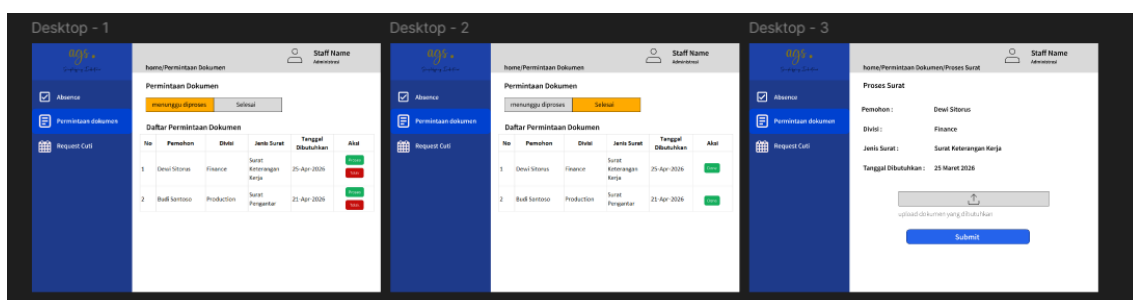

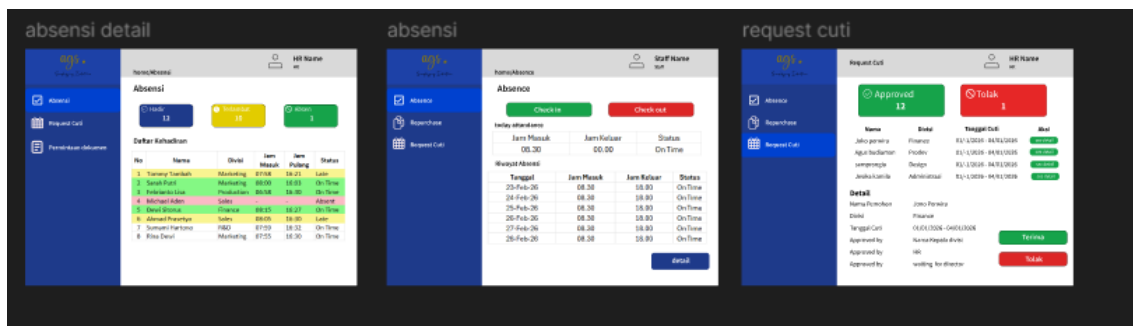

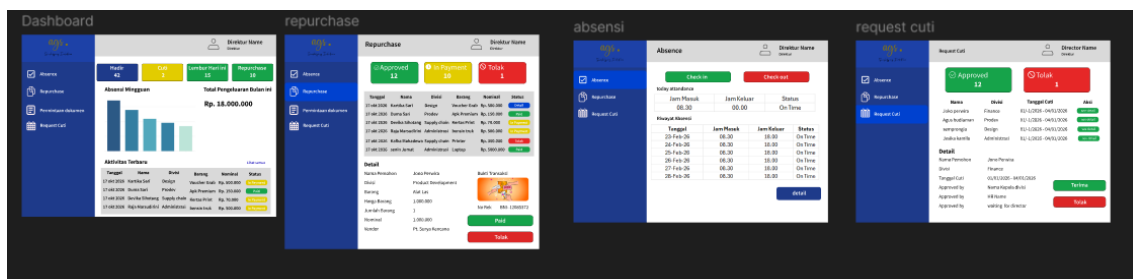

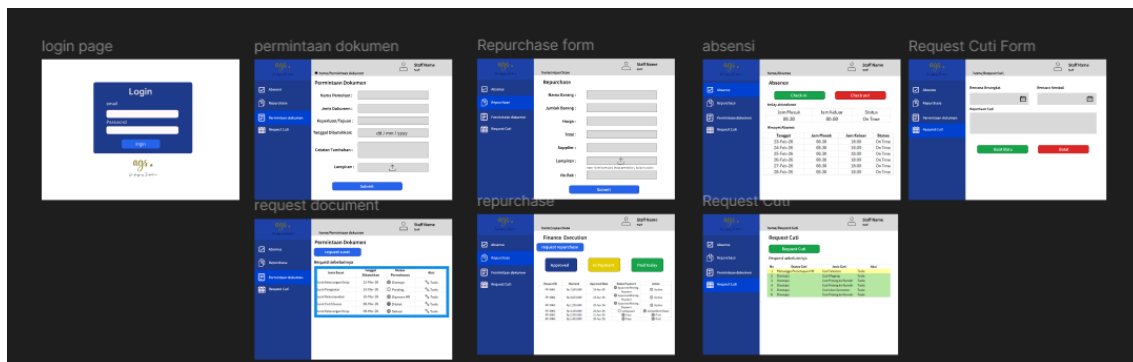

4. Main Features

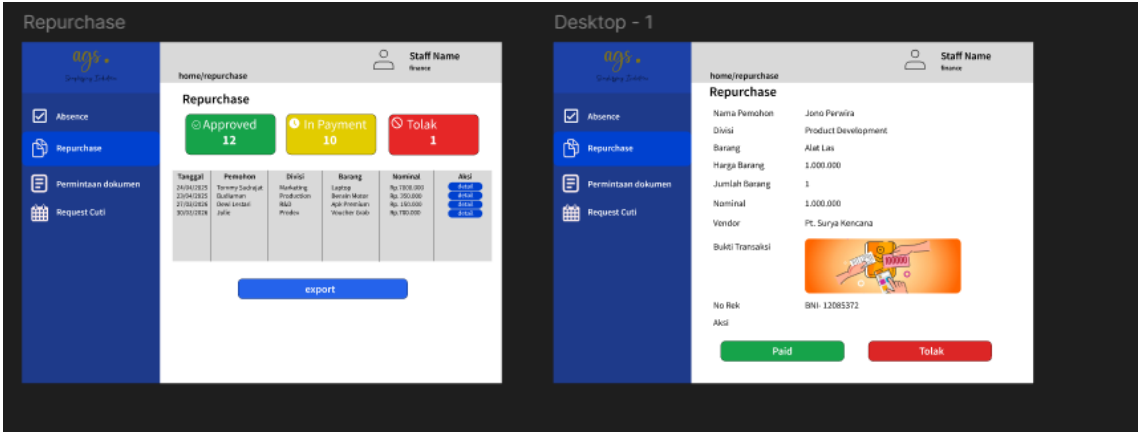

Authentication (Login System)
Dashboard Monitoring
Attendance Management
Leave Request Management
Document Request System
Repurchase Management

6. Technology Stack

Backend: Laravel Framework
Frontend: HTML, CSS, Bootstrap/Tailwind
Database: MySQL
Charts: Chart.js
